

Testing Ticket (Back-end) Documentation -

1. Ticket Name/ID

TEST007 - Dataset Validation Testing

2. Steps Performed

- Cloned the main branch
- Created a new branch from main
- Added a new test file: test/test_ticket_dataset_validation.py
- Implemented tests for invalid and incomplete food data
- Ran the tests using unittest

3. Tests Executed

- test_invalid_food_data: Sent various invalid food data to the validation function
- test_incomplete_food_data: Sent incomplete food data to the validation function
- Command used: `py -m unittest test/test_ticket_dataset_validation.py`

4. Test Results

- Both tests ran successfully (output: `..\n-----\nRan 2 tests in 0.001s\n\nOK`)
- No crashes or unexpected errors occurred

5. Changes Made

- Added new file: test/test007.py
- No changes made to existing code or files

6. Errors Found (if any)

- No errors found during testing

7. Additional Notes

- The tests confirm that invalid and incomplete data are handled gracefully by the validation logic
- Ready for review and sign-off

Thanks!
