Food Remedy API
Target User Reviews Analysis [RE052]

Prepared For: Food Remedy API
Team Author: Zhi Wang
Date: 31 August 2025 (T2 2025)

INTRODUCTION

This research report focuses on analysing user reviews from two high-profile nutrition and lifestyle applications: **MyFitnessPal** and **Fastic**. Both apps are widely downloaded on iOS and Android platforms and provide valuable insights into how users perceive food tracking, fasting support, and general health management. Unlike traditional feature-based competitive analysis, this study uses **direct user feedback** to identify recurring **pain points** and **praised features**, highlighting opportunities for Food Remedy API to refine its user experience and service delivery.

The goal of this research is to extract patterns from authentic user reviews, understand user expectations in health and nutrition apps, and provide recommendations that ensure Food Remedy avoids common pitfalls while strengthening aspects that users consistently value.

USER FEEDBACK ANALYSIS

Common Pain Points (Top Issues Reported)

1. **Data Reliability**
   MyFitnessPal users frequently report missing food logs, lost history, and inaccurate syncing of nutrition and exercise data.
2. **Subscription and Account Management**
   Problems restoring premium subscriptions after changing devices, as well as confusion over billing and access to paid features.
3. **Bug-Related Frustrations**
   Failing features such as meal creation (MyFitnessPal) or malfunctioning widgets and fasting timers (Fastic).
4. **High Pricing Concerns**
   Fastic users particularly criticise the app for expensive subscriptions compared to alternatives.
5. **Device and Unit Limitations**
   Complaints about poor integration with Google Fit / Samsung devices and lack of flexible measurement units (e.g., cups instead of grams).

Praised Features (Top User Highlights)

1. **Comprehensive Tracking**
   Both apps are praised for combining multiple aspects of health tracking (diet, exercise, hydration, sleep, fasting) in one platform.
2. **Motivational Features**
   Users value reminders, streak mechanisms (Fastic's "Flame streak"),

and bonus rewards that help maintain consistency.

3. **Interface Design**
   Fastic is particularly noted for its simple, clear, and user-friendly layout.
4. **Educational Value**
   MyFitnessPal is recognised for its extensive food database, barcode scanning, and nutritional transparency.
5. **Habit Formation Support**
   Users credit these apps with helping them sustain long-term dietary discipline and healthier lifestyles.

INSIGHTS FOR FOOD REMEDY API

The reviews highlight several lessons directly applicable to Food Remedy API:

- Avoiding Weaknesses: Stability and data reliability must be prioritised to avoid frustrations similar to MyFitnessPal's lost logs or Fastic's faulty widgets. Pricing and subscription transparency also need clear communication to maintain user trust.
- Leveraging Strengths: Motivational mechanisms, intuitive UI, and transparent food information are strong differentiators that Food Remedy can adopt or enhance.
- Balancing Simplicity and Flexibility: While users appreciate clean designs, they also demand flexible units, broader device integration, and options for personalised tracking.

RECOMMENDATIONS FOR INTEGRATION

Based on user review analysis, the following recommendations can be applied to the Food Remedy API platform:

1. Ensure Data Integrity and Reliable Syncing
   Implement rigorous testing for food logging, syncing, and cross-device usage to prevent record loss.
2. Transparent Subscription Model
   Offer clear communication of premium vs. free features, and provide seamless subscription restoration when switching devices.
3. Introduce Motivational Mechanics
   Adopt streak counters, progress badges, or daily reminders to enhance user engagement.
4. Optimise Cross-Platform Compatibility
   Support multiple devices and measurement units to accommodate diverse user needs.
5. Expand Food Database with Educational Cues
   Provide extensive food information alongside digestible nutritional explanations, reinforcing Food Remedy's educational mission.
6. Maintain a Simple but Flexible UI
   Keep interfaces uncluttered while offering customisable tracking and configuration options.

CONCLUSION

The analysis of user reviews from MyFitnessPal and Fastic underscores the importance of **data reliability, transparent pricing, and robust integration** in building user trust. At the same time, features that **motivate, educate, and simplify tracking** consistently receive positive recognition and drive user loyalty.

By adopting these insights, Food Remedy API can position itself as a health platform that not only avoids common frustrations but also maximises user satisfaction through clear design, flexible options, and engaging motivational tools. This approach will ensure that Food Remedy not only matches but surpasses existing competitors in delivering a reliable and user-centric health experience.

I like it!
***Editing review: there is a problem with Fastic widgets. The fasting progress doesn't show correctly. It still asks you to press to start fasting even if you are already fasting. ***

I like the features, it's very cute. And it's not expensive at all. I tried noon, it has similar features and everything but it's bit too expensive. I like every time when a milestone passes, they tell you okay this is where your body starts burning stored fat. And that gives you motivation to go on I drink a lot of coffee so generally I don't feel hungry even without doing fasting.

I was unconsciously doing fasting for years, but I never followed any professional guidelines. I think this is finally the app for me, because I tired so many weight lost app and none of them really worked. I will update my review after 3 months and see how it goes. Thank you developers! :)
