Food Remedy API

App Store Optimisation (ASO) Keyword Research [RE061]

Prepared For: Food Remedy API Team

Author: Anushka Kumar

Date: 8 September 2025 (T2 2025)

PLATFORMS: Apple App Store (EN-AU primary) and Google Play (EN)

COMPETITORS: MyFitnessPal, YAZIO, Lifesum, Cronometer, FatSecret

1. OBJECTIVE

Identify high-value keywords utilized by prominent nutrition and health applications, analyse coverage across competitors, and propose a targeted set for Food Remedy's store listing.

2. METHODOLOGY

- Source review: Analyzed competitor titles, subtitles, brief descriptions, and initial lines of their listings to identify the keywords they strategically optimize for.
- Demand proxy: Categorized keywords into Very High, High, and Medium grades utilizing the Apple Search Ads "Search Popularity" idea (indicative demand signal) alongside cross-application usage frequency; Android demand deduced from Play listing standards and availability. The precise volumes are confidential.
- Compliance guidelines: Recommendations prohibit keyword stuffing and superlatives in accordance with Google Play metadata regulations.

3. RANKED KEYWORDS (Relevance x Demand)

Ranked by fit to Food Remedy's scan-to-safety MVP and indicative search demand bands.

Rank	Keyword	Relevance to Food Remedy	iOS Demand	Android Demand	Rationale
1	food scanner	Very High	High	High	Direct barcode-scan intent; consumer phrasing.
2	barcode scanner (food)	Very High	High	High	Feature term present across leading listings.
3	nutrition info	Very High	High	High	Outcome language users expect.
4	allergen scanner	Very High	Medium–High	Medium–High	Clear whitespace vs calorie-first apps; safety USP.
5	allergen warnings	Very High	Medium	Medium	Safety messaging variant.
6	personalised nutrition	Very High	Medium–High	Medium–High	Matches profiles/preferences positioning.
7	nutrition tracker	High	Very High	Very High	Category staple for discoverability.
8	food tracker	High	High	High	Ubiquitous across competitor copy.
9	diet tracker	High	Very High	Very High	High-demand generic; adjacent traffic.
10	food label scanner	High	Medium–High	Medium–High	Solves label-comprehension pain point.
11	healthy food choices	High	High	High	Shopper value phrasing.
12	gluten-free scan	High	High	High	Diet-specific scan intent; strong conversion.
13	ingredient checker	High	Medium–High	Medium–High	Alternative to "scanner" phrasing for verifying intent.
14	safe food scanner	High	Medium	Medium	Trust cue for parents/carers.
15	kilojoule (kJ) counter (AU)	High	High (AU)	High (AU)	AU localisation term (kJ) to match search behaviour.

16	grocery shopping	Medium	Medium–High	Medium–High	Context-of-use modifier pairs with scan terms.
17	meal planner	Medium	High	High	Common in competitor copy; secondary to MVP.
18	vegetarian scan	High	Medium–High	Medium–High	Diet filter intent (persona-aligned).
19	macro tracker	Medium	Very High	Very High	Breadth term competitors push heavily.
20	calorie counter	Medium	Very High	Very High	Highest-demand head term; optional for reach.

4. COMPETITOR LIST (coverage of key terms)

✓ - consistently present in title/subtitle/first lines.

Keyword	MyFitnessPal	YAZIO	Lifesum	Cronometer
calorie counter/tracker	✓	✓	✓	✓
macro tracker	✓	✓	✓	✓
nutrition tracker	✓	✓	✓	✓
food diary/food tracker	✓	✓	✓	✓
barcode scanner (food)	Limited	✓	✓	✓
meal planner/recipes	✓	✓	✓	—
intermittent fasting	✓	✓	✓	—
Allergen scanner/warnings	Rare	Rare	Rare	Rare

Listings referenced: MyFitnessPal, YAZIO, Lifesum, Cronometer.

Interpretation: The classification is guided by calories, macronutrients, and dietary records. Barcode scanning is visible but not consistently prioritized. Allergen and safety labelling is overlooked; this is Food Remedy's unique positioning.

5. RECOMMENDATIONS

- **Primary Targets (use in name/subtitle and first two lines)**

  food scanner; barcode scanner (food); nutrition info; allergen scanner; allergen warnings; personalised nutrition; food label scanner. Add “nutrition tracker” or “food tracker” once in body copy for category coverage.

  Why: These terms align with the scan-to-safety MVP and are less saturated than calorie/macro phrasing, while still capturing high-intent search. (Competitor emphasis confirms the whitespace on allergen/safety.)

- **Secondary Targets (keyword field / long description/locale tests)**

  gluten free scan; ingredient checker; healthy food choices; safe food scanner; kilojoule/kJ counter (AU); meal planner. Optional breadth: diet tracker; macro tracker; calorie counter (only if the experience supports them).

- **Compliance Notes**

  Avoid keyword stuffing and superlatives (e.g., “best”, “#1”) in Play metadata; keep titles ≤30 characters; ensure copy reflects delivered features.
