RE062 – Competitor Store Listing Benchmarking

Scope — Benchmarked **MyFitnessPal, Yuka, Lifesum** on the AU App Store (and cross-checked Google Play where helpful). Focused on: **icons/branding**, **screenshots & preview videos + messaging**, **description structure**, **review highlights**.

Summary table

App	Icon & branding	Screenshots / video	Screenshot & top-of-page messaging	Description structure	Review highlights
MyFitnessPal	Clean, fitness-forward brand; subtitle: "Macro, Diet & Food Tracker." Blue theme.	~10 screenshots; no AU video.	Emphasizes all-in-one tracking: macros, food DB, fasting, community.	Long-form with bold headers + bullets.	4.7★, very large review volume.
Yuka	Wellness/clarity brand; subtitle: "Find and eat healthy products." Emphasizes independence.	~7 screenshots; no AU video.	Barcode scan → health impact + healthier alternatives.	Medium-length narrative; less bullet-heavy.	4.9★, high trust with "70M users."
Lifesum	Lifestyle-centric, subtitle: "Food Tracker & Meal Planner."	~10 screenshots across devices.	Highlights AI-assisted logging, meal plans, Life Score.	Long-form, detailed, with feature lists.	4.6★, Editors' Choice recognition.

What they're doing well (patterns)

1. **Icons = simple glyph + strong single color.** Readable at small sizes and consistent with in-app palette (helps recognition and trust in search lists). (See each AU App Store page.)
2. **Screenshot sets tell a story in 6–10 frames.** Each starts with a broad promise ("all-in-one," "scan for clarity," "meal plans") then drills into features (macros, barcode scan, alternatives, plans). Apple Watch frames appear when available to expand credibility.
3. **Copy is skimmable long-form.** Strong headline + short intro; then bold sub-heads and bullets (benefits first, features second), finishing with pricing/legal and a fresh "What's New."
4. **Social proof is prominent.** Star averages + review counts appear high up; "Editors' Choice," category rank, and user-count claims (Yuka's "70M users") reinforce trust.
5. **Consistency across iOS & Android.** Value props and tone largely match between App Store and Play, reducing cognitive dissonance for cross-platform users.

Best practices Food Remedy should adopt for launch (4–5 clear moves)

1. **Icon that communicates "safety at a glance."**
   Use a **simple, high-contrast glyph** (e.g., shield + leaf or allergen "spark" symbol) on a solid background. Keep 1–2 colors max for legibility in search lists (mirrors competitor simplicity). (Benchmark: simple glyphs dominate.)
2. **10-frame screenshot narrative with captions.**
   Order your frames as: (1) **Promise** ("Scan & eat safe"), (2) **Allergen alerts**, (3) **Additive flags**, (4) **Symptom→ingredient insights**, (5) **Safer alternatives**, (6) **AU products & barcodes**, (7) **Personalization (profiles)**, (8) **Privacy/no ads** (if true), (9) **Grocery flow (shop aisle)**, (10) **Apple Watch/Widget**. Use **big, 3–6-word headlines** on each frame.
3. **Short headline + skimmable long-form description.**
   Start with one sentence: *"Scan groceries for instant allergen & additive warnings—shop safely in seconds."*
   Follow with **bold sub-heads and bullets**: Allergen alerts • Additive explanations • Symptom matching • Substitutes • AU catalogue • Privacy. Close with pricing & a human "What's New" note each release (keeps the page fresh). (Competitors use this exact layout.)
4. **Surface social proof early.**
   If you secure any early accolades (e.g., "Featured by X"), place it near the top screenshot. Consider an **"Editors' Choice-style"** confidence element (press quotes, clinician advisory note, or university partnership) to match the trust signals others display.
5. **Mirror value-props across iOS & Android.**
   Keep **identical promises** and similar screenshot captions on Play to reinforce brand memory; update both stores together so "What's New" stays in sync. (Competitors show strong cross-store consistency.)

placement guide (Food Remedy)

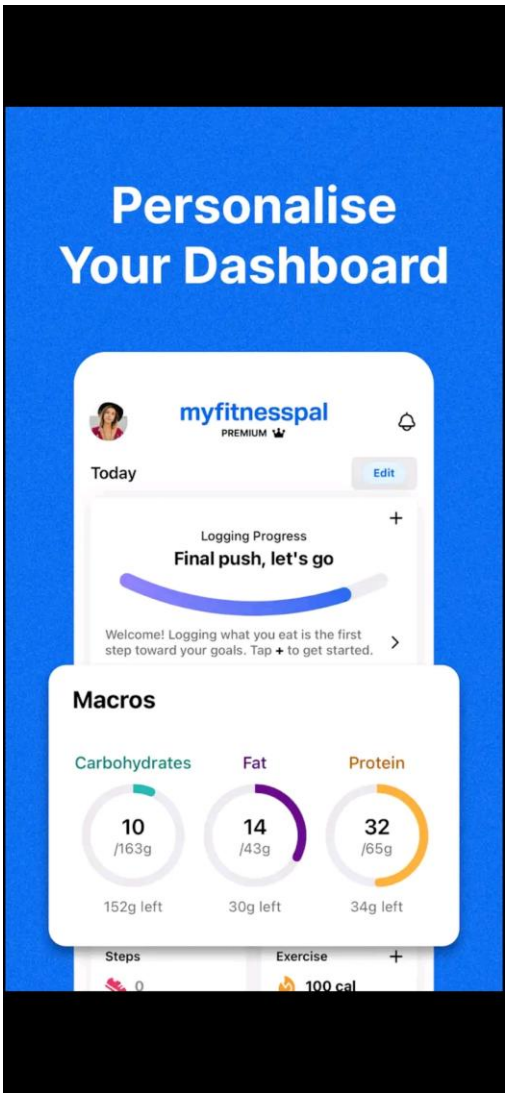
Here's a recommended **10-screenshot flow** with suggested captions:

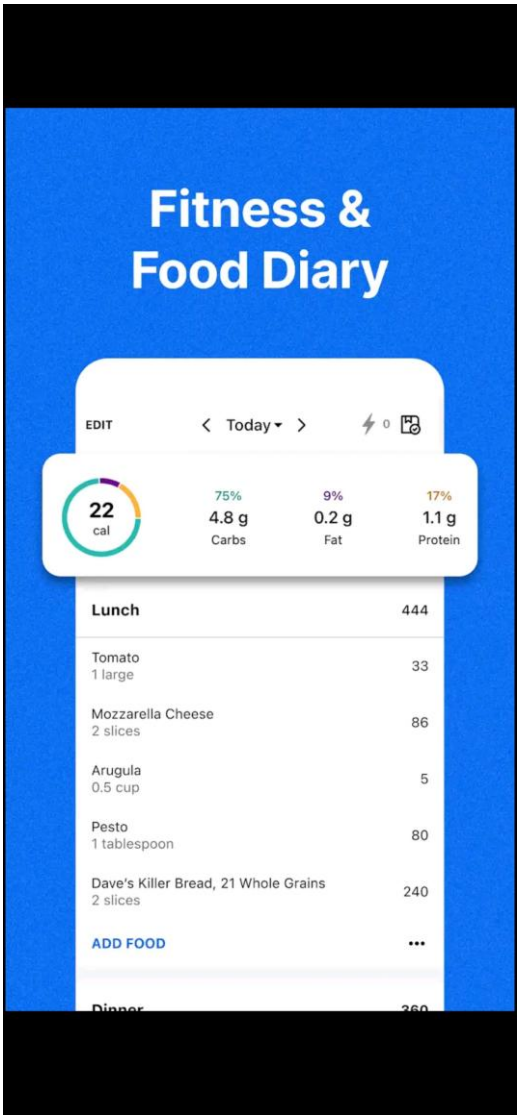
1. **Promise (hero)** – *"Scan & Eat Safe"*
   → Use the app icon and tagline on a bright background.
2. **Core Feature** – *"Instant Allergen Alerts"*
   → Show a barcode scan with allergens flagged in red.
3. **Additives** – *"Check Additives at a Glance"*
   → Display product label scan with additives explained.
4. **Personalization** – *"Track Your Triggers"*
   → Show symptom-to-ingredient mapping screen.
5. **Safer Alternatives** – *"Find Better Options Instantly"*
   → Show side-by-side "original vs recommended."
6. **Local Relevance** – *"Works with Australian Products"*
   → Show scanning an Aussie supermarket brand.
7. **Profiles** – *"Customize for Your Needs"*
   → Display user profiles (nut allergy, gluten-free).
8. **Privacy** – *"Independent • No Ads"*
   → Use clean, trust-building imagery.
9. **Everyday Use** – *"Shop Smarter, Faster"*
   → Show a phone scanning in a supermarket aisle.
10. **Extras** – *"Check on Apple Watch & Widgets"*
    → Show watch/widget mock-ups for credibility.

Competitor Screenshots for Benchmarking

MyFitnessPal

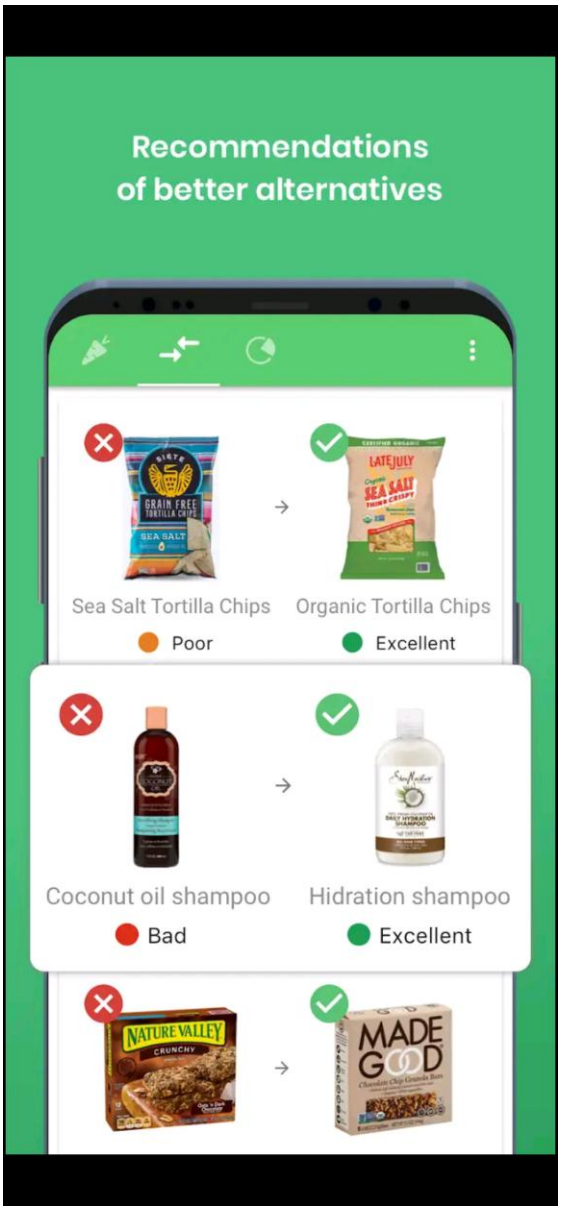
- Strong blue branding that reinforces fitness and health.
- Screenshots focus on macro tracking and community support.
- Description uses bold section headers and a long-form structure for clarity.

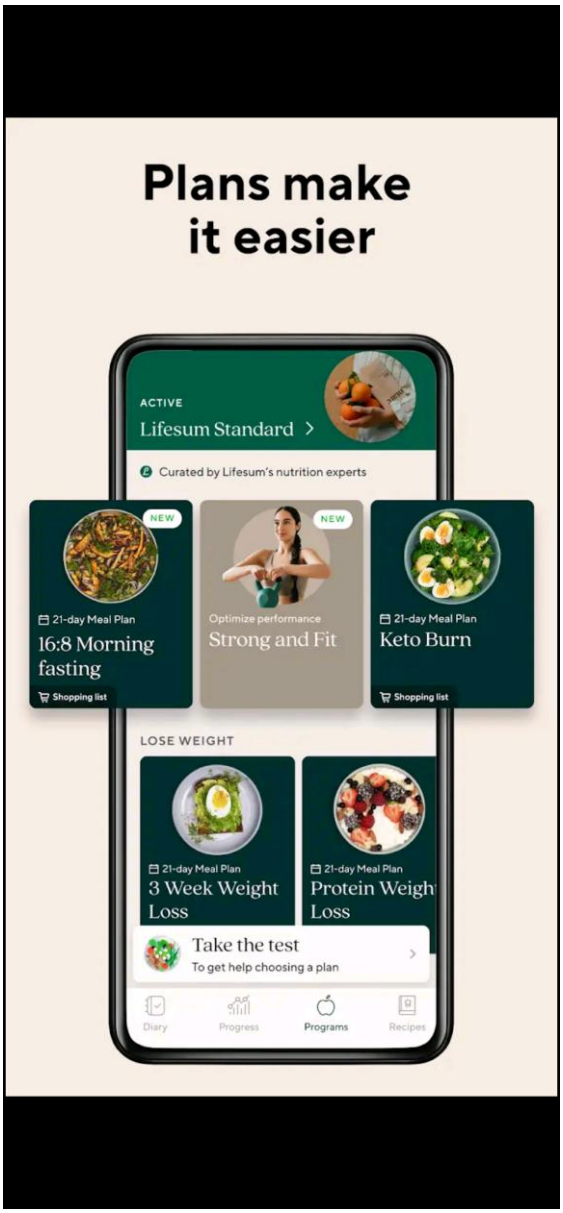




Yuka

- Shows barcode scanning with clear health impact ratings.
- Messaging emphasizes healthier alternatives and trust with “Independent • No ads.”
- Branding leans towards simplicity and transparency.



Lifesum


- Highlights **AI-assisted logging** (photo, voice, scan).
- Emphasizes **meal plans** and **Life Score** for lifestyle guidance.
- Displays credibility with **"Editors' Choice" recognition**.
