Test Demographics

- While the settings in Demographics ***expected to be Profile-based*** are simply ***universal within the account***, it is ***assumed to be valid only when the Primary Profile is selected as Active Profile throughout the testing***

Your Health Profile

Demographics shape reference portions and risk rules for recommendations.

DEMOGRAPHICS (FOR PERSONALISATION)

Age band

18 - 25 years

26 - 35 years

36 - 50 years

51 - 70 years

71+ years

Used to apply age-appropriate reference portions and nutrition guardrails in recommendations.

Sex (reference intakes)

Female

Male

Other / Prefer not to say

Used to align reference intake values where sex-specific nutrition guidance applies.

Nutrition guardrail level

Relaxed

Moderate

Strict

Controls how strict sodium and sugar limits should be in recommendations.

Testing Checklist

1. Allergy Warning Test

- Action: Searching a product containing peanuts to see whether warning shows to a profile with allergy on peanuts

Product selected

```
{"barcode": "9300682057684",  
  "brand": "M&M'S",  
  "productName":  
  "peanut M&M's 380gm", ...}
```

None

✔ Overall product match

Good fit • 100%

This result is calculated using the user demographic profile, health goals, and allergen checks.

✔ Allergen check

No conflict found

No listed allergen conflict was found between your profile and this product.

🛒 Add to Shopping List

- Remark: *Gluten* in the *Intolerances* treated as *Allergens* instead (see **Profile B**)

2. Dietary Preference Respect

- Action: Switching to Vegan and/or Vegetarian profile to check whether animal-based products are avoided or warned

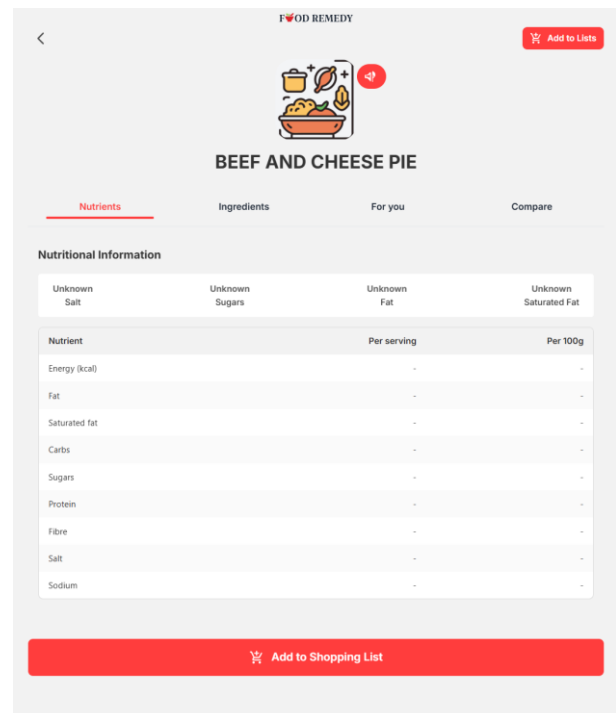

Product selected

```
{"barcode": "9310663403607",
```

```
"brand": "",
```

```
"productName":
```

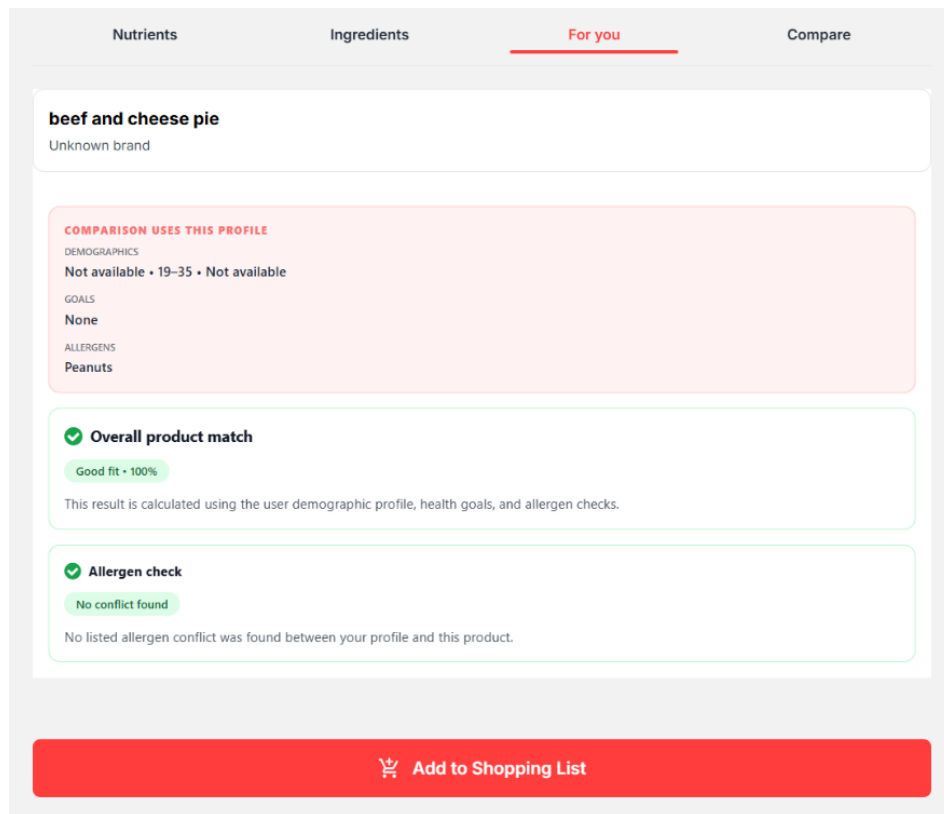

```
"beef and cheese pie", ...}
```

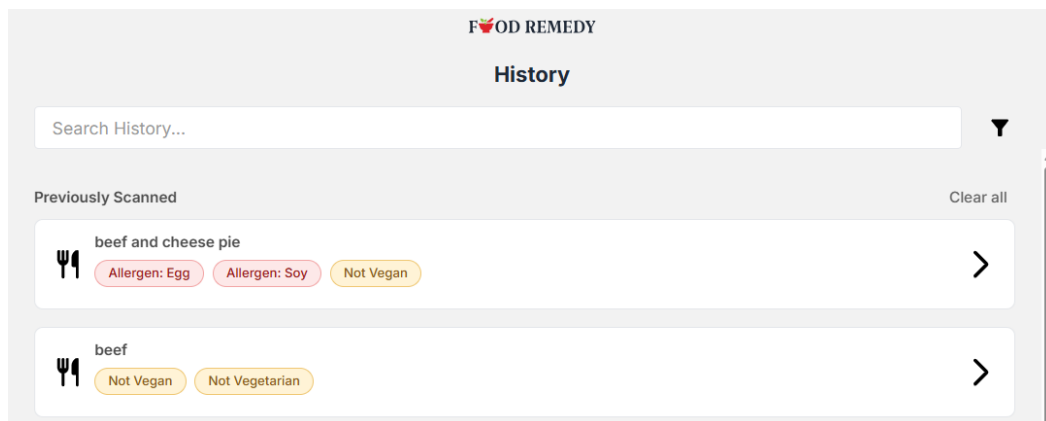

- Expectation: Clear warning/reminder(s) (for personalisation) in tab “For you”
- Result(s): **Fail**
(no personalised warnings/reminders for *Not Vegan / Not Vegetarian*)

- Behaviour(s) observed:

Profile A

- Remark(s): tags of *Not Vegan* / *Not Vegetarian* are available on searching/history functionality **but not the personalisation features**

3. Nutrition Guardrail Level-Based Recommendation

- Action: Searching an obviously unhealthy product with a *Strict* Nutrition Guardrail Level and a *Relaxed* Nutrition Guardrail Level to see whether
 - warning shows for a *Strict* Nutrition Guardrail Level
 - healthier alternatives suggested for a higher Nutrition Guardrail Level

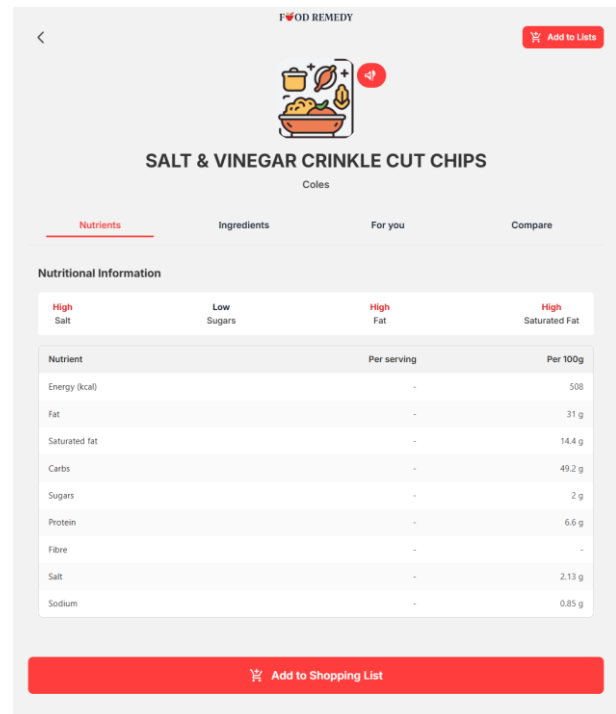

Product selected

`{"barcode": "9300601379422",`

`"brand": "Coles",`

`"productName":`

`"salt & vinegar crinkle cut chips", ...}`

- Expectation:
 1. Warning shown in tab “For you” (referring to demographics of **Primary Profile**), and
 2. Healthier alternatives suggested in tab “Compare”
- Result(s): **Fail**
 1. Field expected to be showing option in Nutrition Guardrail Level instead labelled as *Not available*; no personalised warnings)
 2. Those collections of observed suggestions are **identical**, meaning **no better alternatives** appear after changing back to *Strict Nutrition Guardrail Level*

- Behaviour(s) observed:
 1. Absence of warning(s)

- Remark(s): Nutrition Guardrail Level appeared not fully integrated into warning or recommendation logics yet

4. Alternative Product Quality

- Action: Switching to Vegan and/or Vegetarian profile and searching a product to check whether suggested alternatives make sense

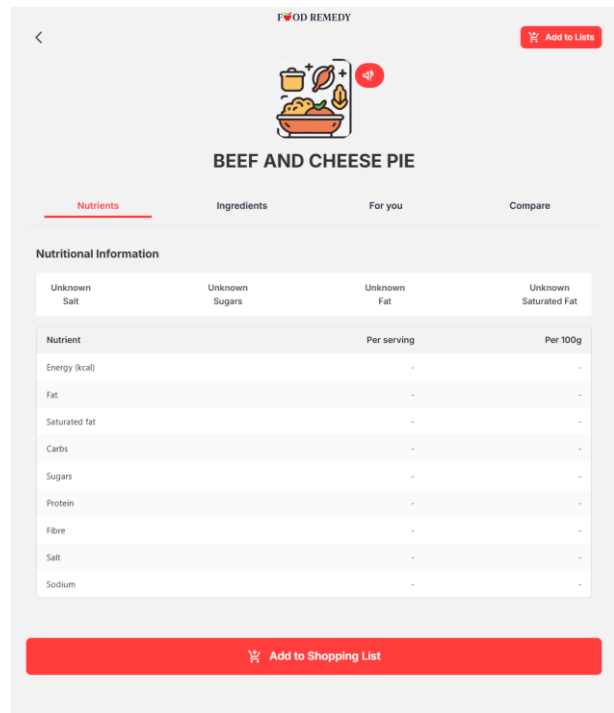

Product selected (same as part 2)

```
{"barcode": "9310663403607",
```

```
"brand": "",
```

```
"productName":
```

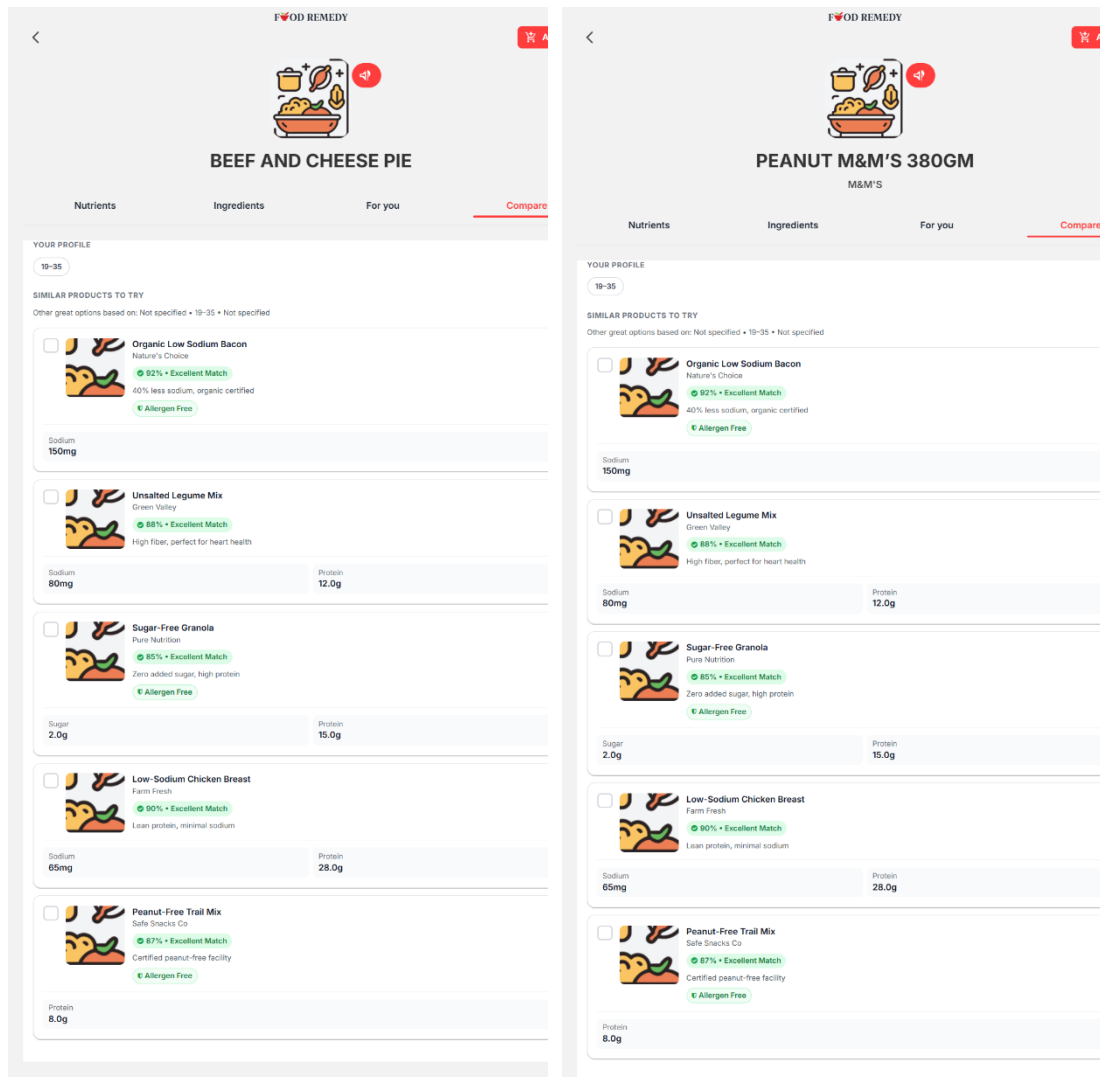

```
"beef and cheese pie", ...}
```

- Expectation: Alternatives suggested in tab “Compare” are relevant to the searched product and reasonable to the profile (for personalisation)
- Result: **Poor** (very likely NO result-based alternative recommendation suggested, even bacon and chicken breast are suggested to a Vegan profile)

- Behaviour(s) observed:

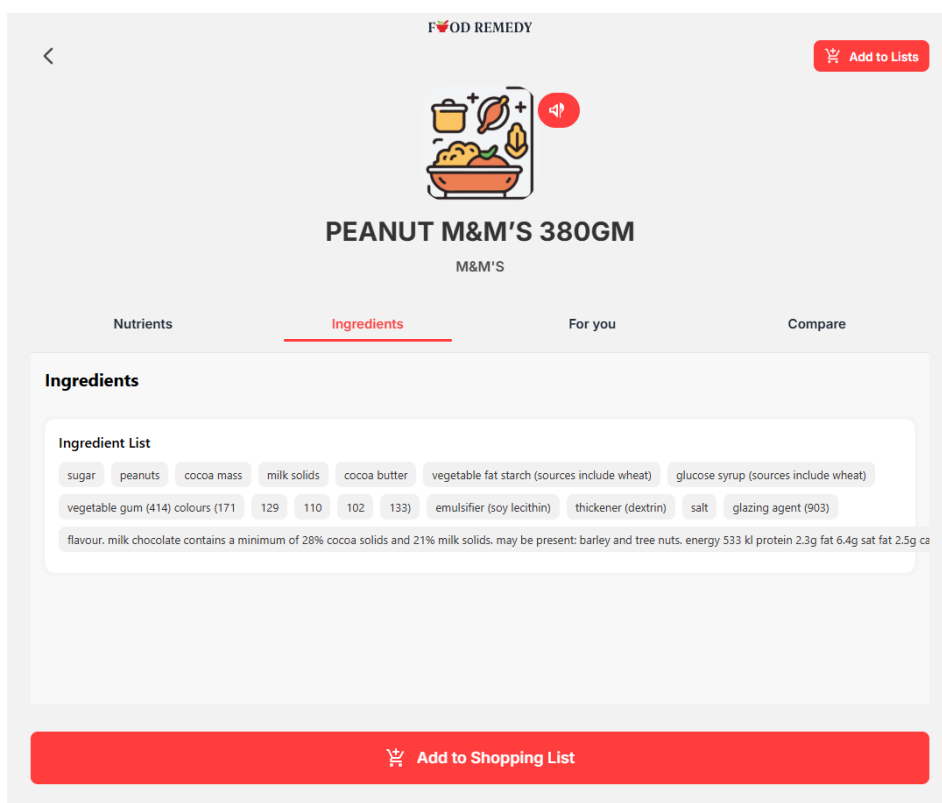

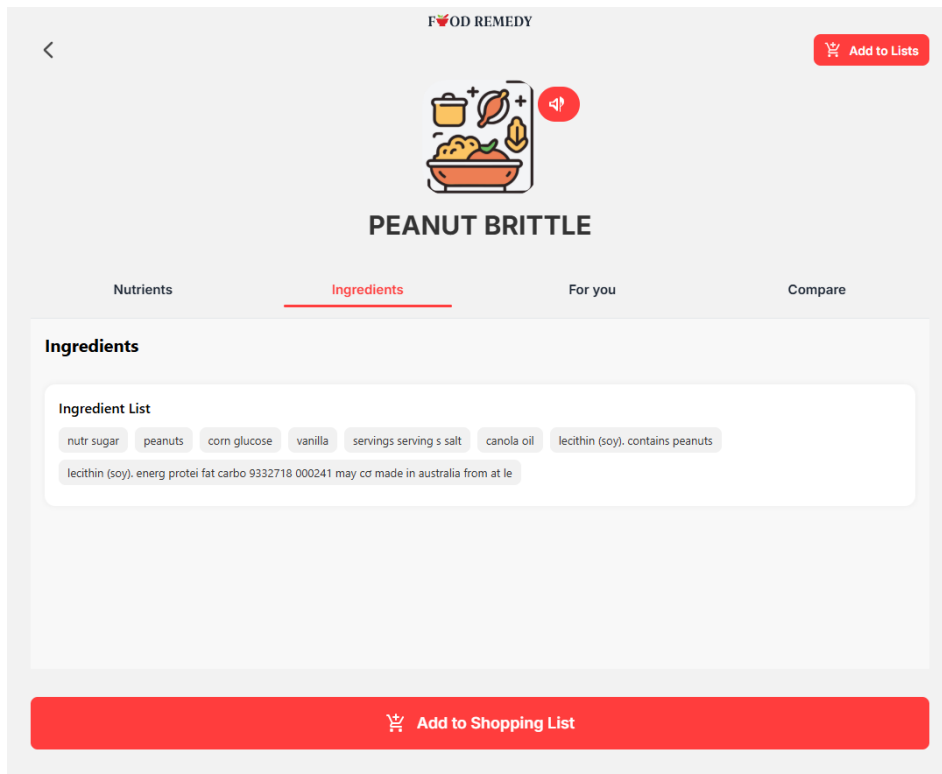

Profile A (Vegan profile)

- Remark(s): possibly reflecting a somehow hardcoded approach/list of suggestions is used rather than personalised/profile-based one

5. Overall Consistency & User Experience

- Overall Personalisation Effectiveness: Moderate
- Major Issues Found
 - Allergy detection and warning work fairly well but not always the ingredient list (wrongly truncated blocks of strings as follows)

- Dietary preferences (Vegan / Vegetarian) are basically **NOT considered** in recommendations
- Nutrition Guardrail Level has **NO observable impact** on suggestions

- Alternative recommendations are healthier but **not much relevant** to the searched product
- Suggestions for Improvement
 - Strengthen integration between user profile (e.g. allergies, intolerances, and dietary preferences) / demographics (e.g. guardrail) and the recommendation engine
 - Improve clarity of explanations on suggestions in tab “Compare”
 - Make alternative suggestions more context-aware rather than generic healthy options
