1. Introduction

The Food Remedy API project's deployment-related research from Trimester 1 is reviewed in this publication. Finding all deployment-related research requests and categorizing them based on how valuable they are for the present stage of development is the goal. Based on the project's current requirements, each ticket has been categorized as Relevant, Outdated, or Incomplete.

2. Classification of T1 Deployment Research

Reference Number	Status	Notes
RE031 – App Store & Play Store Submission Requirements and Guidelines	Relevant	Keep using this research to make sure the program complies with the most recent release procedures and app store submission standards.
RE032 – Performance Optimization for Mobile Application Deployment	Relevant	Performance optimization remains essential before production deployment and should continue guiding performance improvements.
RE033 – Mobile App Security and Data Protection Standards	Relevant	To safeguard user and application data, keep implementing the suggested security procedures.
RE034 – User Privacy Compliance and Policy Requirements	Relevant	Future deployment efforts should be supported by privacy compliance, which is still a need.
RE035 – Scalability and Backend Readiness for Production Deployment	Relevant	Research on backend scalability is still crucial as the application gets closer to being deployed in production.
RE036 – Testing Strategies for Production-Level Mobile Applications	Relevant	Functionality, integration, usability, and performance testing prior to release are still supported by testing methodologies.
RE037 – User Experience Readiness and App Store Standards	Relevant	User experience and app quality remain important for successful application approval and release.

RE038 – Post-Deployment Monitoring and Continuous Improvement	Relevant	After deployment, monitoring and analytics should still be used to support application dependability.
RE039 – Security, Privacy, and User Data Protection in Mobile Health Applications	Relevant	Throughout development and deployment, security and user data protection are crucial.
RE040 – Estimated Deployment and Operational Costs for Food Remedy API	Relevant	Operational cost estimates remain useful for planning cloud infrastructure, Firebase usage and long-term deployment costs.

Figure 1: Classification of T1 Deployment Research

Classification of T1 Deployment Research
Deployment research retained for Trimester 2 implementation

Ref. No.	Ticket Description	Status	Key Notes
RE031	App Store & Play Store Guidelines	✓ Relevant	Guide for meeting submission requirements and release processes.
RE032	Mobile App Performance Optimization	✓ Relevant	Guideline for essential performance improvements before production.
RE033	Mobile App Security & Data Protection Standards	✓ Relevant	Application of recommended practices to protect app and user data.
RE034	User Privacy Compliance & Policy Requirements	✓ Relevant	Ongoing requirement supporting future deployment activities.
RE035	Scalability & Backend Readiness	✓ Relevant	Crucial research as the application moves towards production.
RE036	Testing Strategies for Production Mobile Apps	✓ Relevant	Support for functional, integration, usability, and performance testing.
RE037	User Experience Readiness & Standards	✓ Relevant	Ensuring app quality for successful approval and release.
RE038	Post-Deployment Monitoring & Continuous Improvement	✓ Relevant	Analytics implementation for long-term reliability and updates.
RE039	Security, Privacy & Data in Mobile Health Apps	✓ Relevant	Critical focus throughout development and deployment.
RE040	Estimated Deployment & Operational Costs	✓ Relevant	Useful estimates for cloud infrastructure, Firebase, and long-term planning.

3. Summary

Ten deployment-related research tickets that were finished during Trimester 1 were found during the examination. Since the Food Remedy API is still working toward production

deployment, all of these are still relevant. Throughout Trimester 2, the current research team will continue to expand on these results rather than replace earlier work. Successful implementation still depends on factors like testing, security, privacy, scalability, monitoring, app store requirements, and operating expenses.
